

Customers with tough requirements have made us experts

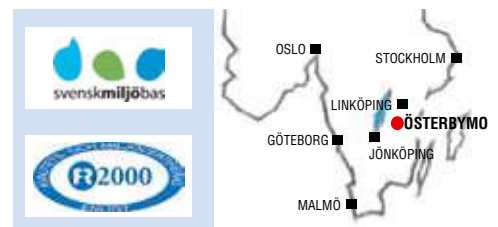

## More and more people are discovering the advantages of our lightweight boxes with lift

The entire side of the box opens. The boxes weight is optimally minimised which provides positive benefits where the vehicle's load capacity is concerned.

The boxes are made from in-house manufactured insulated sandwich constructions and in-house developed aluminium profiles. The exterior profiles are manufactured from electrically oxidised aluminium, which provides a scratch-resistant and dirt repellent surface. The boxes is based upon standard models that are constructed so that the individual customer's needs are met through a wide range of options. The lightweight boxes walls and roof are constructed from 40 mm insulated sandwich constructions that even out rapid changes in temperature and are also necessary when using cooling and heating aggregates.

The boxes has a crash tested front frame. Kick-plates are made out of 250 mm thick aluminium up to the front frame and along the walls. 45 mm insulated, reinforced wira floor. A 900 mm high load railing is placed on the side walls. Two recessed lamps are placed in the roof with a timer breaker.

**YDRE SKÅP** develops and manufacturers boxes for small and medium sized vehicles in addition to customising light weight vehicles. We utilise a high degree of creativity and a never-ending curiosity for coming up with new solutions, in combination with cost-effective production in order to offer our customers attractive transport solutions.
